

A TIME-TRAVEL STORY SET ACROSS THE MULTIVERSE

A LAW OF CONSTANTS, A STORY OF REDEMPTION

"A Law of Constants" is the passion-project Author & Novelist A.P. Miller always wanted to write! The Science Fiction novel explores the Many Worlds Theory proposed by Erwin Schrödinger. The book tells the story of Special Investigations Agent Derek Foster as he hunts down the Redeemer, a man who threatens the very fabric of time & space with his crusade to right his greatest wrong.

In his travels across the Multiverse, the Redeemer has seen a universe where the United States shook apart into three different countries, a universe where Canada colonized South America, & has encountered Derek Foster in every single one of them. Derek doesn't understand the Redeemer doesn't care about the damage done, he has a singular mind of getting back to his home universe to correct his greatest mistake - the problem is the science of time travel doesn't tell anyone how to land at an exact destination.

The underlying notion about the novel is redemption. Can one person be too lost to be salvaged? Is it possible to be so ruined beyond use? Derek struggles with having to identify his girlfriend's body, then having to see her in the flesh again. The Redeemer struggles with his biggest mistake being too much. The book was designed to be a journey of exploration, in many senses of the idea.

A.P. Miller is a huge fan of Science Fiction, specifically time-travel stories like "Terminator," "the Time Machine" by H.G. Wells, & the seminal X-Men classic "Days of Future Past." A.P. drew upon his super-fandom of the subject, & desire to contribute a powerful story to the genre, when writing his latest novel.

REVIEWS & PRAISE

"Great book can't put it down.. A.P Miller books always are an easy buy worth the money."

"Loved the high concept and multiverse traveling. Great characters, mayhem from start to finish, and some truly touching moments woven in. Smart and sharp with the science and the multiple continuities."

ABOUT THE AUTHOR

A.P. Miller is an author, novelist, & blogger from Wilmington, North Carolina by way of Central Pennsylvania. To date, A.P. has released three novels: "Broken Promise Records" (including a remastered edition of the book), "Days of the Phoenix," & his latest: "A Law of Constants," all of which exist in a shared continuity A.P. refers to as the Millerverse. A.P. is active on Twitter (@Millerverse), TikTok (@Millerverse), Instagram (@TheMillerverse), & hosts a blog at www.millerverse.com.

"There are some things that will always happen, no matter what universe you are in. The oceans will always form, the dinosaurs will always go extinct, & there are some people you will always have to deal with."

-Tennant's Law of Constants

A Science Fiction novel about the lengths one man will go to right his greatest wrong & how hard others will fight back to stop him from destroying everything!
